recommendation that Negroes be admitted to services.

Church segregation in Jackson has been tested weekly. Methodist, Baptist, and Presbyterian churches have turned Negroes away. Episcopal churches have accepted them, but Roman Catholic churches have been open to Negro worshipers for years.

The Jackson Citizens Council recently announced it would conduct a series of meetings for laymen interested in preserving church segregation.

In recent years, the University of Mississippi campus newspaper, The Mississippian, has been a dissident voice in Mississippi, calling for reforms in politics and other areas of public life.

Last year’s editor, Sidna Brower, wrote editorials that took issue with the official Mississippian position that the Ole Miss riots that accompanied the enrollment of James Meredith were caused by United States Marshals. She was censured by the Student Senate.

Conservative Editor

The Mississippian has stirred no controversy this year. The new editor, John Corlew, campaigned for the job as a conservative and the paper generally reflects the prevailing Mississippian attitudes.

The Rev. Wofford K. Smith, Episcopal Chaplain at the university, said the paper is representative of the student body.

"It is hard to find a liberal on the campus these days," he said. "From what I hear, the same situation exists on other campuses in the state."

The Rev. Mr. Smith said it appeared that Mississippi was "reaping the harvest" of an indoctrination campaign conducted during the 1950's following the Supreme Court school desegregation decision.

Citizens Council leaders went into schools over the state, delivering pro-segregation speeches and sponsoring essay contests.

The Daughters of the American Revolution and other groups carried out a campaign to purge textbooks used in the public schools of "their subversive" influences.

Dr. James W. Silver, a history professor at the university, who has managed to stay on despite pressures, said in a recent speech at Memphis that Mississippi is close to becoming a "police state."
